Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/092,179

Applicant(s)

WU ET AL.

Examiner

Beemnet W. Dada

Art Unit

2135

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 May 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-35 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-35 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This office action is in reply to an amendment filed on May 31, 2006. Claims 1-35 are pending.

Response to Arguments

2. Applicant's arguments filed May 31, 2006 have been fully considered but they are not persuasive. Applicant argues that Li (US 6,567,408) fails to teach classifying data packets received from a first classification stage based on a second set of characteristics, where the first classification stage is capable of classifying the data packets based on a first set of packet characteristics. Examiner disagrees.

3. Examiner would point out that, Li teaches classifying a stream of packets received at ESP 24, wherein classification is carried out by a first classification stage, based on a first set of packet characteristics (i.e., for example, arriving packets at ESP 24 are first classified into, VOICE (REAL TIME), HTTP (BEST EFFORT) AND OTHERS (BEST EFFORT), see figure 4, level 1, level 2 and nodes 40, 48 & 46). Furthermore, Li teaches classifying the data packets received from the first classification stage based on a second set of characteristics (i.e., packets classified in the first stage, for example node 48 of figure 4, HTTP (BEST EFFORT), are further classified in a second stage into MARKETING & OTHERS, see level 3, nodes 48, 42 and 44 of figure 4, and column 6, lines 37 – column 7, line 17).

4. With respect to dependent claims 4, 6 and 14, applicant argued that Vaidya fails to teach classifying packets within each of the groups according to packet type or size and further fails to teach the limitation "wherein the lookup table is performed in a flow table and further comprising updating field of the flow table." Examiner disagrees.

Examiner would point out that both Vaidya and Li teach classifying packets according to packet size or type [see Vaidya, column 9, lines 46-61 and column 7, lines 2-21 and Li column 7, lines 21-53] and furthermore, teach performing table lookup in a flow table, further comprising updating field of the flow table, [see Vaidya, column 7, lines 2-11 and column 9, lines 27-35 and Li, column 3, line 63-column 4, lines 20]. Examiner asserts the art on record teaches the claim limitations and therefore the rejection is respectfully maintained.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 1, 3-11, 13-19, 30 and 31-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vaidya US Patent 6,279,113 B1 in view of Li et al. US Patent 6,567,408 B1 (hereinafter Li).

7. As per claims 1 and 30, Vaidya teaches a method for detecting intrusion on a network, comprising:

storing signature profiles identifying patterns associated with network intrusion in a signature database [column 3, lines 27-38 and column 6, lines 35-42];

generating classification rules based on said signature profiles [column 3, line 65 – column 4, line 8];

receiving data packets transmitted on the network [column 6, lines 60-68];

classifying data packets having corresponding classification rules according to said generated classification rules [column 6, line 57 – column 7, line 10];

forwarding said classified packets to a signature engine for comparison with signature profiles [column 6, lines 63 – column 7, lines 5 and column 7, lines 11-21]. Vaidya further teaches classifying data packets according to classification rules [column 6, line 57- column 7, line 10]. Vaidya is silent on carrying out the classification by a first classification stage capable of classifying the data packets and a second classification stage capable of classifying the data packets received from the first classification stage. However, classification of data packets with multi-level stages is well known in the art, which has the advantage of enhancing the performance and efficiency of the system. For example, Li teaches carrying out classification by a first classification stage capable of classifying the data packets on a first set of packet characteristics and a second classification stage capable of classifying the data packets received from the first classification stage based on a second set of characteristics [column 3, line 63-column 4, line 7, column 6, lines 37-67 and figure 7A]. Therefore, it would have been obvious to one having ordinary skill in the art at the time of applicant's invention to employ the teachings of Li within the system of Vaidya in order to enhance the performance and efficiency of the system.

8. As per claims 3-9, Vaidya further teaches classifying said packets according to at least one packet field into groups [column 9, lines 46-61 and column 7, lines 2-21].

9. As per claims 10, 11, 13 and 14, Vaidya further teaches performing a table lookup to select an action to be performed on said packet based on its classification [column 7, lines 2-11 and column 9, lines 27-35].

10. As per claims 15 and 16, Vaidya further teaches partitioning signatures into disjoint groups to define subsets of signature profiles [column 6, lines 27-42].

11. As per claims 17-19, Vaidya further teaches filtering received packets and capturing packets at a network analysis device [column 8, lines 40-55].

12. As per claim 31, Li further teaches the method wherein the first set of packet characteristics includes at least one of a destination address, a protocol type and a destination port number [column 9, lines 37-60 and figures 6 & 7A].

13. As per claim 32, Li further teaches the method wherein the second set of packet characteristics includes at least one of packet type and a size [column 6, lines 37-67].

14. As per claims 33 and 34, Li further teaches the method wherein only the second classification stage remains in communication with a flow table for identifying an action to be taken with respect to the data packets [column 6, lines 37-67 and figures 7 and 8A].

15. As per claim 35, Vaidya further teaches the method wherein the classification rules are generated after filtering the data packets [column 3, line 65 – column 4, line 8].

16. Claims 20-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Copeland, III US Pub. 2002/0144156 A1 (hereinafter Copeland) in view of Li US Patent 6,567,408 B1.

17. As per claim 20, Copeland teaches an intrusion detection system comprising:

- a signature classifier comprising a classifier operable to classify packets according to at least one packet field into groups [paragraph 0139, 0140 and 0165];
- a flow table configured to support table lookups of actions associated with classified packets [paragraphs 0148, 0149];
- a signature database for storing signature profiles identifying patterns associated with network intrusion [paragraphs 0020, 0153-0155]; and
- a detection engine operable to perform a table lookup at the flow table select an action to be performed on said packet based on its classification, wherein comparing said packets to at least a subset of the signature profiles is one of the actions [paragraphs 0157 –0159 and 0163-0165].

Furthermore, Copeland teaches classifying data packets according to data packet information [paragraph 0139, 0140 and 0165]. Copeland is silent on a classifier comprising a first stage classifier operable to classify packets according to at least one packet field into groups and a second stage classifier operable to classify said packets within each of the groups according to packet type or size. However, classification of data packets with multi-level stages is well known in the art, which has the advantage of enhancing the performance and efficiency of the system. For example, Li teaches classifier comprising a first stage classifier operable to classify packets according to at least one packet field into groups and a second stage classifier operable to classify said packets within each of the groups according to packet type or size [column 3, line 63-column 4, line 7, column 6, lines 37-67 and figure 7A]. Therefore, it would have been obvious to one having ordinary skill in the art at the time of applicant's invention to employ the teachings of Li within the system of Copeland in order to enhance the performance and efficiency of the system.

18. As per claims 21 and 22, Copeland teaches the system further comprising a data monitoring device having a capture engine operable to capture data passing through the network and configured to monitor network traffic, decode protocols, and analyze received data [paragraph 0137].

19. As per claim 23, Copeland further teaches a parser operable to parse, generate and load signatures at the detection engine [paragraphs 0142-0146].

20. As per claims 24, Copeland further teaches the system comprising an alarm manager operable to generate alarms [paragraphs 0162-0164].

21. As per claims 25 and 26, Copeland further teaches a filter configured to filter out packets received at the intrusion detection system [paragraphs 0139-0141].

22. As per claim 27, Copeland further teaches the flow table is a hash table [paragraphs 0149-0150]

23. As per claims 28 and 29, Copeland further teaches action options listed in the flow table include dropping the packet and generating an alarm [paragraph 0165].

24. Claims 2 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vaidya US Patent 6,279,113 in view of Li et al. US Patent 6,567,408 B1 and further in view of Copeland US Pub. 2002/0144156 A1.

25. As per claims 2 and 12, Vaidya-Li teaches the method as applied to claim 1 above. Vaidya-Li is silent on the method comprising dropping data packets without corresponding classification rules. However, Copeland teaches an intrusion detection system including dropping data packets without corresponding classification rules [paragraph 0165]. Both Vaidya-Li and Copeland teach a network intrusion detection system. It would have been obvious to one having ordinary skill in the art at the time of applicant's invention to employ the teachings of Copeland within the system of Vaidya-Li in order to enhance the security of the system.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Beemnet W. Dada whose telephone number is (571) 272-3847. The examiner can normally be reached on Monday - Friday (9:00 am - 5:30 pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Y. Vu can be reached on (571) 272-3859. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
